

Backend Project 2 – Debugging Report

I. Identified Bugs:

- Home route accepted only POST requests; GET requests caused route not found.
- Form method was missing, defaulting to GET while backend expected POST.
- `request.args` was used instead of `request.form` for form submission.
- Notes list was not rendered on initial page load.
- Form action was empty, causing unclear routing behavior.

II. Fix Approach:

- The home route was updated to handle both GET and POST methods. The form method was explicitly set to POST, `request.form` was used to retrieve submitted notes, and notes were rendered safely on both initial load and after submission.
